SUMMARY

Computer Science undergraduate experienced in building and deploying full-stack web applications with Java, JavaScript, and Python. Daily Linux user who maintains a personal virtualization lab for networking and security experimentation. Seeking a software engineering internship to apply backend development, systems, and full-stack skills in a production environment.

EDUCATION

Excel Engineering College (Anna University)

Chennai, India

Bachelor of Engineering in Computer Science and Engineering

Expected May 2029 — CGPA: 8.55/10

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, Bash, HTML/CSS

Frameworks & Libraries: Spring Boot, React, Node.js, Express.js, Chart.js, Bootstrap

Databases & ORMs/ODMs: MySQL, MongoDB, Mongoose, Hibernate/JPA

Developer Tools: Git, GitHub, Docker, Docker Compose, Nginx, Postman, Linux (Debian), VS Code, npm

Concepts: REST APIs, MVC Architecture, OOP, JWT, RBAC, Input Validation (Zod), Database Design, Virtualization (KVM/QEMU)

PROJECTS

Library Management System | *Java, Spring Boot, MySQL, Docker*

[GitHub Repo](#)

- Built a full-stack web application using Spring Boot MVC with role-based access control (RBAC) to manage book inventory, borrowing workflows, and accounts.
- Designed 12+ REST API endpoints with spring-boot-starter-validation to enforce strict request payload constraints.
- Containerized the application and database using Docker, automating multi-container orchestration with Docker Compose.

ShopEase eCommerce Platform | *React, Node.js, Express, MongoDB, Docker*

[GitHub Repo](#)

- Developed an eCommerce platform with React/TypeScript frontend and Express.js REST API backend using Mongoose ODM.
- Integrated Razorpay payment processing and secured request payloads utilizing Zod schema validation middleware.
- Dockerized the Node.js application and configured Nginx as a reverse proxy for request routing and static asset delivery.

Smart Expense Tracker | *Node.js, Express.js, MongoDB, Chart.js, JWT*

[GitHub Repo](#)

- Created a stateless finance tracker utilizing JWT authentication stored in secure HTTP-only cookies to mitigate CSRF/XSS risks.
- Constructed MongoDB aggregation pipelines to filter and summarize transaction logs for real-time visualization via Chart.js.

LINUX & SYSTEMS EXPERIENCE

Systems Administration: Manage a Debian desktop development environment; automate software updates, backups, and configurations using Bash scripting.

Virtualization & Lab Setup: Configured a local multi-OS virtualization lab (Debian, Kali, Windows) using KVM/QEMU to test host-only networking and firewall rules.

Network & Security Auditing: Performed network reconnaissance with Nmap and Wireshark; studied OWASP Top 10 vulnerabilities within isolated test subnets.

ACHIEVEMENTS

Academic Standing: Maintaining an 8.55/10.00 CGPA in Computer Science and Engineering while building independent software.

Open Source & Automation: Created modular setup scripts to automate fresh installations and symlink dotfiles for Linux environments.
